

## Titan: Barcoding

Titan Barcoding allows for more accurate data entry operations in critical areas such as inventory control for either manufacturing or wholesale distribution industries.

Through our sophisticated Barcoding system, manufacturing users can track and move materials from purchasing, through job costing, to shipping and distribution. Users can serialize manufacturing processes, using barcoding to track the completion of all processes, also capturing data about start and stop times.

### **Feature Summary:**

- **Reliability:** Our barcode formats are designed with various forms of error checking built into the code.
- **Accuracy:** Titan Barcode systems are almost error-free. They do not rely on the accuracy of a human entering data on a keyboard.
- **Speed:** Data is entered into the computer more rapidly

Strong data retrieval capabilities and an integrated tool set add to the power of the application. Utilizes the PROGRESS-4GL RDBMS technology. Source code available.
