Titan: Counter Sale

The Titan Counter Sale module completes the sales and distribution cycle at point of sale for distributors and retailers.

Feature Summary:
- Incorporates the functionality of order processing, direct billing, and cash receipts
- Defines cash drawers
- Cash drawers can be password protected
- Numerous terminals can be associated with a particular drawer
- Credit cards are defined with default GL code and number format
- Serial/lot functionality is available at the time of invoice line entry
- Price defaults and discounts can be overridden
- Create back orders for out-of-stock situations
- Create invoices from existing orders without re-entering data
- Reverse invoices easily at any point before, or after, a transaction - partial reversals accepted
- Payment can be made with cash, check, credit card or customer account
- Various reports are available - session history, payments and invoices. Inquiries can be made on cash drawers, their history, the sessions and terminal assignments

Strong data retrieval capabilities and an integrated tool set add to the power of the application.
Utilizes the PROGRESS-4GL RDBMS technology. Source code is available.
