Titan: Electronic Data Interchange (EDI)

EDI has the capability to process data between your company's computer and with computers in any of your trading partners, using a standard format. Data is exchanged in an error free, closed-loop process.

For example, Titan's Purchase Orders can be sent to your vendor's order entry system without human intervention. The opposite is also true; you can receive orders automatically and much faster than by human data entry. More and more companies are indicating EDI as a prerequisite for doing business with them. Therefore, any computer solution being considered should not only be EDI compatible but EDI ready!

Feature Summary:
- Improve your customers' satisfaction
  - Reduce order turnaround time
  - Improve order processing accuracy
  - Provide EDI interfaces becoming required by many customers
- Increase your cash flow
  - Reduce the lead time between ordering and collections
  - Eliminate the paper transmittal times
- Reduce your clerical cost and improve confidence level of information
  - One time data entry
  - Reduced errors, improved error detection
  - Automate the order entry function Reduce labor requirements and phone chatter
  - Reduce the quantity of paper handled, especially for high volume orders
  - Faster management reporting
  - Higher productivity without increasing staff
- Uniform communications with all trading partners
  - Customers
  - Suppliers
  - Carriers
  - Banks and financial institutions
- Better market position relative to non-EDI competitors

Strong data retrieval capabilities and an integrated tool set add to the power of the application.

Utilizes the PROGRESS-4GL RDBMS technology. Source code available.
