OneStep After Imaging

OneStep After Imaging is a powerful module in our OneStep family of add-on modules. It integrates seamlessly with Titan™, Varnet™, and MXP™ database to provide a "one step" process for completely managing the after imaging process.

Implementing after imaging can be a daunting process. Why invent yet another custom method? Why add to your headaches? Simply put, our clients love OneStep After Imaging. With this product you can enable after imaging and relax knowing that your data and changes are safely archived.

OneStep After Imaging uses our proprietary AiPArc program to mangage every element of the after image data. Configure the product options and execute it with in cron. That's it!

Let OneStep After Imaging do the heavy lifting. Please contact us for ordering information.

Key features:
- Seamless integration with your Titan™ and MXP™ database
- AiPArc manages the extent switching.
- AiPArc manages the extent processing.
- AiPArc manages the extent archiving.
- AiPArc manages the database backup archiving.
- AiPArc logs all activities.
- AiPArc notifies you whenever errors occur.

Customer comments:
"I turned it on and haven't touched it since! Simply wonderful"
"24/7 uptime. It runs and it works well."
