

OneStep Fax

OneStep Fax is a key module in our OneStep family of add-on modules. It integrates seamlessly with Titan™, Varnet™, and MXP™ to provide a "one step" process for faxing documents. OneStep Fax integrates immediately with all standard report-style programs to give a consistent, simple interface for faxing. It is coupled with VSI-FAX™, the worldwide leader in integrated fax solutions.

Our clients have found the OneStep products to be invaluable in their ability to process volumes of information in a short amount of time. Eliminate the countless, cumbersome trips to the printer to retrieve yet another report, only to turn around and head straight for the fax machine. Instead, simply use OneStep Fax to designate a fax recipient just like you would designate a printer from within Titan™ or MXP™, and get on with the work you really need to do. Let OneStep Fax do the rest.

Simply select a pre-configured "printer" and be prompted for cover page details. Your regular output (from any standard report) is sent via fax automatically by OneStep Fax:

Key features:

- Seamless integration with Titan™ and MXP™
No added steps or new processes to learn -- specify a fax destination just like a printer
- Support for an abundance of output formats, including support for overlays
- Built with the Progress 4GL™
- Save time and resources while streamlining your processes

Customer comments:

"Like a deer caught in headlights...was the response our collections department received when the customer said, 'I don't have that invoice.' For I could hear the fax machine in the background ringing with a copy of the invoice. With OneStep Fax we can send documents in only a few moments and our receivables shows the results."

"We use VSI-FAX and OneStep Fax to handle hundreds of documents daily. It really works well and has drastically reduced paper usage."

"Material usage reports are sent every day to our key vendors eliminating the need for time consuming phone calls."
