

## OneStep Group Security

Do you manage enough users that the standard Titan security list is unworkable?  
Do you find it burdensome to edit the security list?

Implementing OneStep Group Security is a snap. Add the new tables, add the core security check program to Titan, and recompile!

### **Key Features:**

- Group Security allows you to manage users within groups.
- Group Security allows Titan functions to be tied to groups.
- Group Security allows users to be mapped to groups.
- Full table listings are included.
- Full table inquires are included.
- Copy security from one user to another.
- Source is available.
